

PLUG IN WITH TREND MICRO AND KASEYA

As a technician, you often have too many consoles to manage, making it harder to ensure that every device within your customer’s environments are accounted for and protected.

At a time when you’re expected to deploy clients to unprotected devices, perform on-demand scans when customers request assistance, and force updates to those devices, you’re also being pressured to maximize profitability by automating and by having centralized management.

The Trend Micro Worry-Free Services Plug-in for Kaseya allows you to integrate Trend Micro Worry-Free Services with your existing Kaseya VSA™ console. This allows you to do your job from a single pane of glass, maximizing your efficiency. It also allows you to discover every device within your customer’s environment and deploy Trend Micro Worry-Free Services to ensure that they are protected against the latest threats.

Trend Micro Worry-Free Services protects your customers with an industry-leading endpoint security solution. Plug in to your existing Kaseya VSA, without any additional hardware to manage, and without sacrificing features and functionality.
